- Adjustable output in four steps
- Adjustable color temperature 2200/3000/4000K
- Built-in adjustable light relay

exStreet POP is a pole-mounted luminaire with an adjustable bracket, making it suitable for both pole tops (straight poles) and pole arms (poles angled at 90°). The luminaire has an asymmetrical light distribution that is well suited for footpaths/cycle paths, car parks or on facades above gates, for example. exStreet POP has flexible colour temperature settings in three modes: 2200K/3000K/4000K, as well as adjustable power in four modes between 12 and 40W. It also has a built-in light relay/photocell that is adjustable in three modes: 25-200 lux or off. In the off position, it functions as On/Off and can be used with external control. exStreet POP is made of cast aluminium and has IP66 and IK08 ratings. The luminaire is powder coated in AzkoNobel powder coating in grey (RAL 9006). A 6-meter connection cable is included, and the luminaire has a built-in spirit level to facilitate installation.
